

Achievement Tests

Achievement tests measure learning of general or specific academic skills. Achievement tests provide results that can be linked to most occupational requirements while helping to identify potential areas needing remediation (such as vocabulary). They are usually either general survey batteries covering several subject areas or single-subject tests. They can be criterion-referenced, norm-referenced, or both. Achievement tests are usually identified by grade level. It is important to establish the specific purpose for giving an achievement test to decide what type to use. Examples include:

- Stanford Achievement Test (STAT)
- Wide Range Achievement Test-Revision 3 (WRAT 3)
- Basic Achievement Skills Inventory (BASI)
- Basic Achievement Individual Screener (BASIS)
- Kaufman Test of Educational Achievement, Second Edition
- Peabody Individual Achievement Test-Revised-Normative Update (PIAT-R/NU)
- Woodcock Johnson III
- Adult Basic Learning Examination (ABLE)
